

series 2400

CHEMICAL INJECTION PUMPS

PRODUCT FEATURES

- Maximum discharge pressure: 4,000 PSI (276 bar) w/ 1/2" plunger
- Maximum volume: 880 GPD (3,331 Liters) w/ 1-1/4" plunger
- Each fluid end is adjustable while running Simplex or Duplex configuration
- Available in 2 stroke rates: 30 or 60 strokes/minute
- 1 Horsepower motor is standard (2 hp optional) 1 or 3 phase-TEFC or Explosion Proof
- Oil-less Drive Unit
- Plunger Sizes: 1/2", 3/4", 1", 1-1/4"

MODEL DESIGNATION

The 2400 Series chemical injection pumps are electric driven, positive displacement pumps utilizing C-faced motors and common gear reducers. The gear reducers are available in 30 or 60 strokes per minute. Four different plunger sizes provide a wide selection of volumes and pressures.

The 2400 Series is available in Simplex or Duplex configurations. They are adjustable while running and each are driven off an eccentric cam gear which requires no oil bath.

2400 Pump Assembly - Simplex

Item	B/P No.	No. Reqd	Name	Material
1	TC-2150	2	Cover	ASTM A48 C.I.
2	P86-025075-0200	8	Thumb Screw	Cad. Pl. Steel
3	TB-1647	2	Gasket Cover	Nitrile
4	TD-0528	2	Housing	ASTM A48 C.I.
5	P01-050150-0200	4	HHCS 1/2-13x1.50	Cad. Pl. Steel
6	P25-050000-0200	4	Nut, Hex 1/2-13	Cad. Pl. Steel
7	P52-050000-0200	4	Cut Washer 1/2	Cad. Pl. Steel
8	TC-2165	1	Base Plate	Galv. Steel
9		2	Assembly F/E	316 SS
10	TA-6474	2	Cross Head Bearing Long	Rulon
11	TA-6473	2	Cross Head Bearing Short	Rulon
12	TA-5966	2	Screen	SS
13	TC-2152	2	Cross Head Assembly	17-4PH. SS
14	TB-1646	2	Eccentric Cam Assembly	Steel
15	TA-6470	2	Key	Carbon Steel
16	TA-6476	2	Shaft Bearing Small	Rulon
17	TB-1648	1	Reducer 30 SPM	
	TB-1649	1	Reducer 60 SPM	
	TB-1650	1	Reducer 120 SPM	
18	TA-6471	2	Stroke Adjustor	17-4PH. SS
19	TA-6477	2	Adjusting Screw	416 SS
20	TA-5953	2	Drive Clip	Steel
21	TA-6495	1	Motor (IHP-EXP Proof)	
22	TA-6475	2	Shaft Bearing Large	Rulan
23	TC-2172	1	Drive Shaft	4140
24	P01-037150-4400	8	HHCS	SST
25	P01-037150-0200	8	HHCS	SST
26	P25-037000-0200	8	Hex Nut	SST
27	P52-037000-0200	8	Lock Washer	Steel
28	P55-037000-0200	8	Flat Washer	Steel

2400 PUMP FLUID END PARTS LIST

INSTALLATION AND START-UP INSTRUCTIONS

INSTALLATION

Pump Location - An Important Factor

- Plan ahead for proper pump mounting-position it to provide for efficient routing of suction and discharge lines, as well as electric service
- Avoid long suction lines
- Provide for a flooded suction line whenever possible
- Pump fluid lines and connections operate best when there is a minimum restriction to the medium flow
- Install the proper electrical starters and disconnect switches
- It is recommended that a solid mounting support be provided—take advantage of the factory installed holes in the base plate for securing the pump

FLUID END

- All fluid connections, both suction and discharge, should be sealed tight. Fluid end connections are 1/2" NPT
- The suction connection is at the bottom of the fluid end, and the discharge connection is at the top.

MOTOR

- A conduit connection is provided at the motor for electrical connections.
- Assure the proper electrical service has been provided
- Assure all connections are tight, in their proper location, properly grounded, and fused

GEAR REDUCER

- Check the oil level of the gear reducer
- If the oil level is below the output shaft oil plug, refill to the plug Mobil Cylinder Oil 600W or Texaco Metropia 460
- For low temperature applications, use Mobil SHC 634

START UP

- Open the priming valve on the fluid end assembly
- Start the pump motor
- Allow the pump to run until a clear stream of media comes out of the priming valve
- Close the priming valve
- Check the packing for proper sealing. If it leaks, stop the pump and make the necessary adjustments.
- Adjust the stroke adjustment knob to obtain the desired flow rate.

PREVENTIVE MAINTENANCE

- Check periodically (minimum once a month) and apply a small amount of grease to the cam bearing and to the crosshead areas that cycle through the linear bearings.
- Check the packing regularly. If leakage is observed, stop the pump. Make a small adjustment by turning the gland nut. Restart the pump. (Do not over-tighten the packing as this will reduce the packing life and possibly damage the plunger.

It is always important to assure the packing material is compatible with the media being pumped—check for swollen or deteriorated seals.
